ScamCatch

The voice that speaks up before you send.

ScamCatch catches scams on the phone, in the moment, and opens a live AI voice that talks the person through it before any money moves.

Jonathan Kim, Founder · Mirae Opus LLC · scamcatch.io

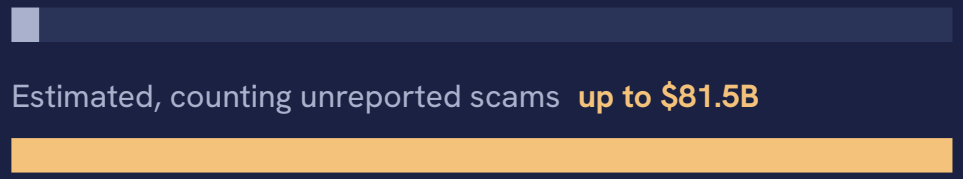

THE PROBLEM

Older Americans lost up to $81.5 billion to fraud in 2024

$81.5B

lost to fraud by Americans 60+ in 2024

The FTC's upper estimate, counting the many scams that are never reported. Its very conservative floor is $10.1 billion.

4×

Reported losses grew from about $600 million in 2020 to $2.4 billion in 2024, driven by single losses over $100,000.

$83K

Average reported loss per victim age 60+ in 2024, across more than 147,000 FBI complaints.

THE GAP

Every scam has a moment when the person is alone with the scammer, deciding. Today's defenses, like chargebacks, police reports and account monitoring, show up after the money is gone.

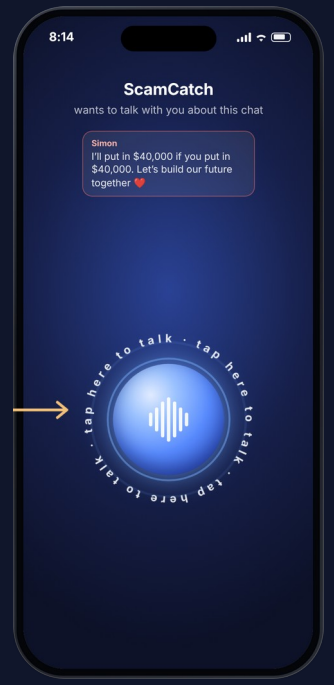

Sources: FTC, Protecting Older Consumers 2024–2025 (Dec. 2025); FBI IC3 2024 data as reported by AARP.

THE SOLUTION

It catches the scam on the phone, then starts a conversation

1 It reads the moment

With permission, it reads the text on screen in the apps people already use: texts, WhatsApp, Facebook.

2 It spots the pattern

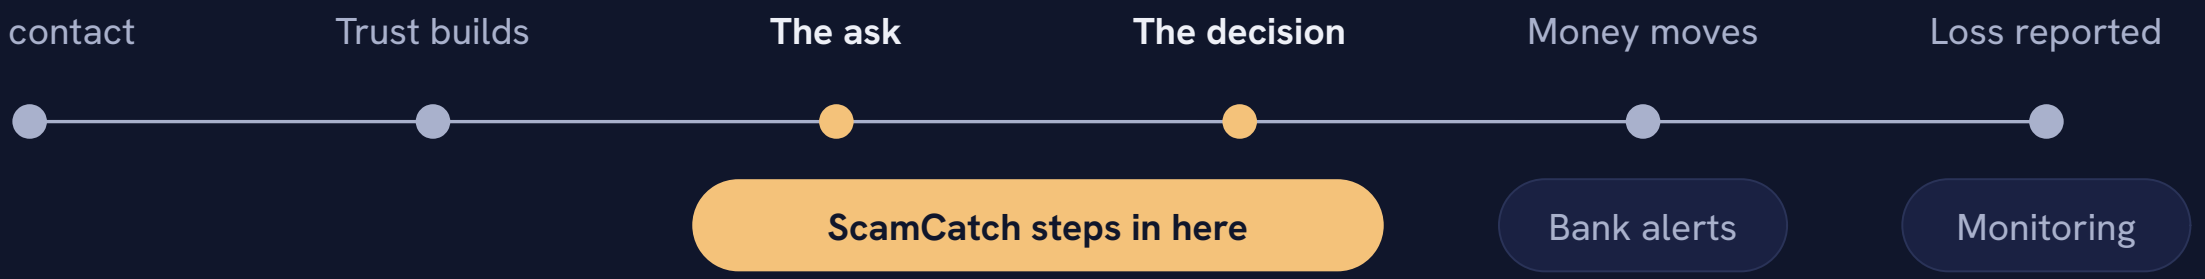

An AI model flags the signs: a new online relationship, urgency, secrecy, a request for money.

3 It calls you

A live AI voice opens, listens, asks questions, and helps the person check before any money moves.

WHAT SETS US APART

Other tools act after the decision. ScamCatch acts during it

Account monitoring

e.g. Carefull

Watches accounts and alerts family after transactions happen.

Scam checkers

e.g. ZoraSafe

Help only if the person already suspects a scam and stops to ask.

Bank fraud alerts

At payment time

Arrive after the person has decided. Scammers often coach victims to wave them off.

ScamCatch

In the conversation

Notices the scam in the chat itself, speaks first, and helps the person reach the answer on their own.

TARGET CUSTOMER

Built for older adults. Paid for by those who protect them

The person we protect

Adults 60+ who live on their phones: texts, WhatsApp, Facebook. We start with Android users.

First buyer: banks and credit unions

They want to stop fraud before the payment and keep their members' trust. ScamCatch gives them a voice in that moment.

Also: families and senior living

Adult children who want a safety net for Mom or Dad, and senior living communities protecting their residents.

Beachhead: community credit unions, which are member-owned and close to the older people they serve.

THE MARKET

A problem worth billions, with a clear channel to reach it

$81.5B

lost by Americans 60+ in 2024

FTC upper estimate; floor $10.1B

61.2M

Americans age 65 and older

U.S. Census Bureau, 2024

8,452

U.S. banks and credit unions

FDIC and NCUA, mid-2026

$734M

a year in revenue potential

If institutions pay $1 per protected senior per month

across 61.2 million Americans 65+. One credit union with 20,000 members 65+ would be $240,000 a year.

Illustrative pricing. We will set real prices in pilots.

THE VISION

A first line of defense on every phone in America

Illustration from scamcatch.io, not live data.

Built to scale. Text recognition runs on the phone. The AI voice costs about 5 cents a minute and only runs when a scam is flagged. One frontline layer of many, alongside banks, carriers, family and law enforcement.

NOW

Android app

Catches scams in any app, right on the phone.

NEXT

Bank-triggered calls

A risky payment at a partner bank starts a ScamCatch call first.

THEN

Every phone in America

With the person's OK, alerts go to their bank, the authorities, family and community.

BEYOND

Fighting back

An AI decoy ties up the scammer. Crypto tracing follows the money to the exchange.

TRACTION

A working product, built solo. Customers come next

WHAT'S BUILT

Android app

Reads the screen in any app, with the person's consent.

AI scam detection

Flags scam patterns in the text the person is reading.

Live AI voice

Opens when a scam is flagged and talks the person through it.

Public live demo

scamcatch.io: 8 real-world scams and a live AI voice anyone can try.

WHERE WE ARE TODAY

0	0	0	$0
users	pilots	contracts	revenue

Pre-launch, and we say so plainly. The product works. Now it needs people.

NEXT 90 DAYS

- Test the voice with 25 older adults
- Sign a first credit union pilot
- Measure how often people pause and verify

REVENUE MODEL AND FUNDING

Institutions license it. Families can buy it directly

Institutional license

Banks, credit unions and senior living pay per protected member per month, and offer ScamCatch free to their older customers.

Family plan

Adult children subscribe on behalf of a parent.

WHY WE BELIEVE THEY'LL PAY

- Families already pay $29.99 a month for after-the-fact monitoring (Carefull, 2023).
- Investors have put $19.7 million into that one company alone.

WHERE THE MONEY STANDS

Revenue	Pre-revenue: $0, with $0 MRR and ARR
Raised to date	$0, founder-funded
Raising now	No
Runway	Ongoing at prototype scale. Costs are low: hosting and per-minute AI.

TEAM

One builder, a clear mission, and a short list of asks

JK

Jonathan Kim

Founder · Software engineer · First-time founder

Built every piece of ScamCatch himself: the Android app, the AI detection pipeline, the live voice, and the cloud behind scamcatch.io.

Advisors: none yet. The first seats to fill are a bank fraud-operations lead and an aging researcher.

WHAT WE'RE ASKING FOR

1. Older adults to test ScamCatch and tell us the truth
2. A bank or credit union pilot partner
3. Mentorship through the AgeTech Collaborative accelerator

Our mission: take the money lost to scams to zero.
