

ScamCatch

SCAM INTERVENTION

ScamCatch catches scams on the phone, in the moment, and opens a live AI voice that talks the person through it before any money moves.

THE PROBLEM

Anyone can be scammed. Most victims never report it.

20 million

Americans may have lost money to fraud in a single year.

AARP

147,127

fraud complaints from people 60+ reached the FBI in 2024, with $4.9 billion lost.

FBI IC3

3 in 4

dollars stolen from older Americans are likely never reported: $20.5B of $28.3B a year.

AARP BankSafe & NORC

THE BELIEF THAT KEEPS VICTIMS QUIET

"Honestly, if you fall victim ... a lot of that is on you."

32% of Americans agree.

53%

see scam victims as blameworthy

47%

think reporting a scam is a lost cause

Sources: AARP fraud survey (2021 losses, published 2023); FBI IC3 Internet Crime Report 2024; AARP BankSafe Initiative with NORC; AARP Fraud Watch Network & FINRA Foundation, "Blame and Shame in the Context of Financial Fraud" (2022).

HOW IT WORKS

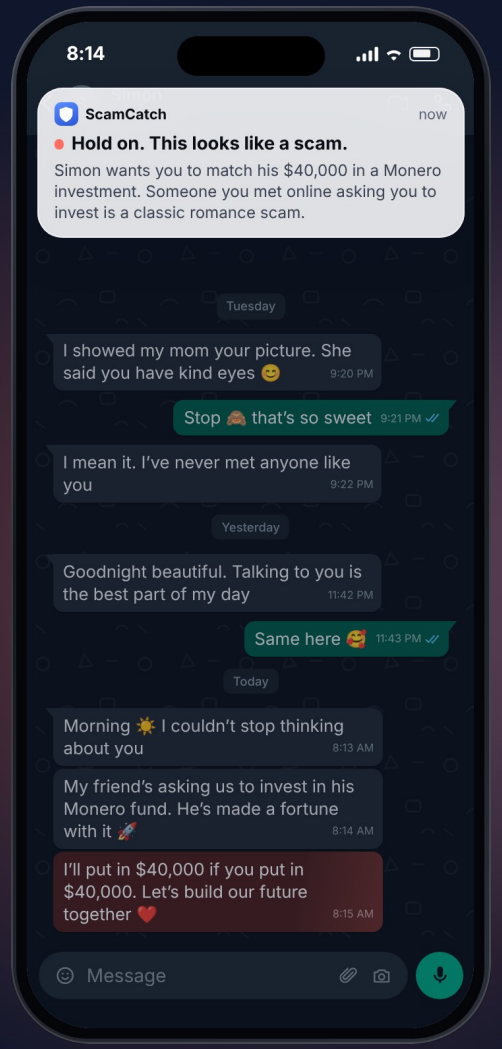

It catches the scam, then it intervenes.

1 It spots the scam on screen

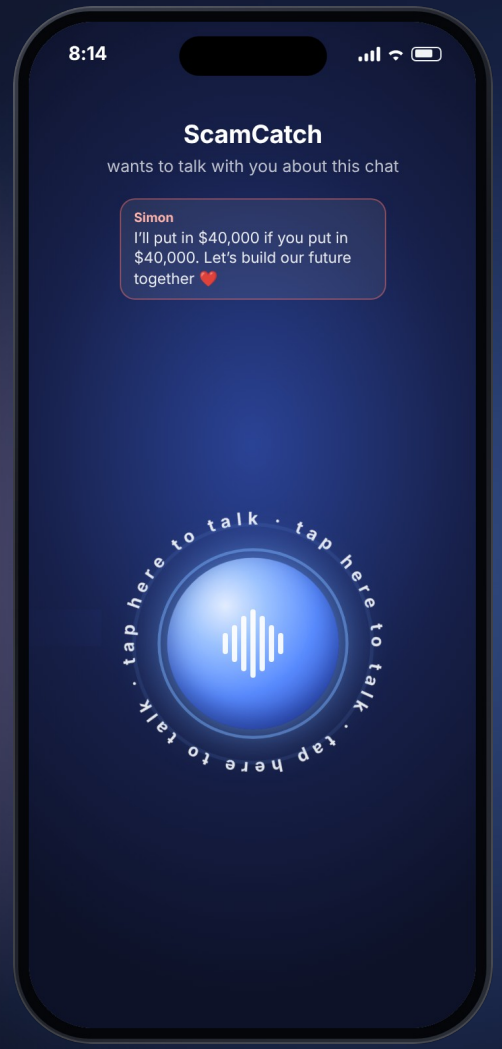

With permission, it reads the chat in apps people already use, like texts, WhatsApp and Facebook, and flags the warning signs.

2 Then a live AI voice intervenes

It listens, asks questions, and helps the person check before any money moves.

1 The warning

2 The voice

THE VISION

A first line of defense on every phone in America.

1. A scammer messages you.
2. ScamCatch intervenes and opens a voice chat.
3. With your OK, it alerts your bank, the authorities, and your trusted contacts.
4. Trace & investigate to help get back lost funds.

WHAT SETS US APART

Other tools act after the decision. ScamCatch acts during it.

Monitoring tools like Carefull alert family after transactions happen. Scam checkers like ZoraSafe only help if the person already suspects a scam and stops to ask. Scammers often coach victims to wave off bank alerts.

IT TALKS LIKE SOMEONE WHO'S ON YOUR SIDE

It listens before it warns.

"That sounds like someone who means a lot to you. How did you two meet?"

It gives a reason to check, not a verdict.

"Before anything moves, let's look up that platform together."

The person stays in charge.

"You decide who else hears about this, if anyone."

MARKET

A problem worth billions, with a clear channel to reach it.

$81.5B

lost by Americans 60+ in 2024

FTC upper estimate; floor $10.1B

61.2M

Americans age 65 and older

U.S. Census Bureau, 2024

8,452

U.S. banks and credit unions

FDIC and NCUA, mid-2026

$734M

a year in revenue potential

If institutions pay $1 per protected senior per month

across 61.2 million Americans 65+. One credit union with 20,000 members 65+ would be $240,000 a year. Illustrative pricing; we will set real prices in pilots.

Built to scale. Text recognition runs on the phone. The AI voice costs about 5 cents a minute and only runs when a scam is flagged.

TARGET CUSTOMER

Built for older adults. Paid for by those who protect them.

The person we protect

Adults 60+ who live on their phones: texts, WhatsApp, Facebook. We start with Android users.

First buyer: banks and credit unions

They want to stop fraud before the payment and keep their members' trust. ScamCatch gives them a voice in that moment.

Also: families and senior living

Adult children who want a safety net for Mom or Dad, and senior living communities protecting their residents.

Beachhead Community credit unions, which are member-owned and close to the older people they serve.

TRACTION, REVENUE MODEL AND FUNDRAISING

A working product, built solo. Customers come next.

Traction

- Working Android prototype: reads the screen, flags scams, opens a live AI voice.
- Public live demo at scamcatch.io with 8 real-world scams.
- 0 users, 0 pilots, 0 contracts so far.
- Families already pay $29.99 a month for after-the-fact monitoring (Carefull).

Revenue model

- Banks, credit unions and senior living license it per protected member per month.
- Families can subscribe on behalf of a parent.
- Pre-revenue today: $0 MRR and ARR.

Fundraising

- $0 raised to date, founder-funded.
- Not fundraising now.
- Runway: ongoing at prototype scale. Costs are low: hosting and per-minute AI.

TEAM AND ADVISORS

One builder, one clear mission.

Jonathan Kim

Founder · Software engineer · First-time founder

Built every piece of ScamCatch himself: the Android app, the AI detection pipeline, the live voice, and the cloud behind scamcatch.io.

Advisors: none yet. The first seats to fill are a bank fraud-operations lead and an aging researcher.

Our goal: $0 lost to scams.
